DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Kang et al.

The abstract teaches using 2-4% citrus peel in broiler diets.

Claim Rejections - 35 USC § 102/35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 20-39 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kang et al.

The abstract teaches using 2-4% citrus peel in broiler diets. The patent does not teach poultry being housed in confining spaces. However, it is well known that to

produce broilers, poultry have to be housed in confining spaces. Alternatively, it would have been obvious to one of ordinary skill in the art at the time the invention was made, that in order to produce broilers shown by Kang et al., it would have been necessary to place poultry in confining spaces.

5. Claims 20-39 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Deyoe et al.

The reference teaches feeding broilers up to 2.5% bioflavanoids. Bioflavonoids are inherently present in citrus peels or any citrus byproduct and is known to be a beneficial byproduct of such. (See specification). See page 1088 in the reference. . The patent does not teach poultry being housed in confining spaces. However, it is well known that to produce broilers, poultry have to be housed in confining spaces. Alternatively, it would have been obvious to one of ordinary skill in the art at the time the invention was made, that in order to produce broilers shown by Deyoe et al., it would have been necessary to place poultry in confining spaces.
